

Instructions for How to Make Dog Toys out of Fleece

Materials:

- 3 strips of fleece, 25-31" long, 4-6" wide

To start with, cut three pieces of fleece to be 4 inches wide and anywhere from 25 inches to 31 inches long. The width can also be between 4 and 6 inches.

Next, stack these three pieces on top of each other. The order doesn't matter.

Now wrap a rubber band around the three pieces about 4 or 5 inches from the top.

Next, braid the three strands until you get about 5 inches from the bottom. Try and braid tightly so that a dog couldn't chew through it. If you want, you can hold the top of the braid in between your knees so you can braid tightly.

Once you have braided till 5 inches from the bottom, you can either tie it off with a rubber band first, or just go ahead and make a knot where the braid ends. Try and make the knot as tight as possible so it won't come undone. If you left the rubber band on make sure you cut it off after you make the knot.

Then do the same thing for the top of the braid. Again, you may take the rubber band off first if you think that will be easier.

Now, take a pair of scissors and cut the ends of the fabric into strips of 2 or 3.

That's it! You have made a dog toy out of fleece!
